

**“My family would be lost if something happened to me.”**

**“I need to organize everything before it becomes chaos.”**

In times of emergency.  
Make sure your family can find everything.

# Family Contingency Plan = Family Emergency Binder

Users don't need: "Store all your assets with us."

Users need: "Help me create a map so my family knows where to look."

No need account balances.

No need passwords.

Not hold the money.

Simply ensure your family knows where things are and what to do.

# Family Contingency Platform – A Tech Layer

**The system that helps your family find, understand, and access everything if something happens to you.**

## **We seek to solve the family contingency plan:**

- Where are the documents?
- Who should be contacted?
- What accounts exist?
- What should happen immediately?
- Who can access what?

## **GTM partner with:**

- Insurance agents
- Financial planners
- Mortgage advisors
- Estate planners

## **Information on:**

- Bank accounts
- Brokers
- Insurance
- Crypto
- Overseas assets
- Pension
- Passwords
- Trusted advisors

# Proposition and Design Principles

1. Store **references**, not secrets (directory, not vaults)
2. Explicitly **prohibit credential storage**
3. **Integrate with various cloud services or password/secret managers**
4. Focus on **contingency** process (contact, retrieve, use instruction, etc)
5. Build in **periodical check-ins**, updates, and readiness assessment
6. Build around events (**death, incapacity, medical emergency, migration, retirement, divorce, business succession**)

# User Inception Journey

Form a **Trust Ladder** to let users reveal information in stages:

1. Stage 1 Email address
2. Stage 2 Asset categories e.g. "I have 2 properties."
3. Stage 3 Institution names e.g. "I bank with HSBC."
4. Stage 4 Document locations
5. Stage 5 Procedure to retrieve
6. Stage 6 Contact persons info
7. Stage 7 Family / trustee set-up
8. Stage 8 Readiness (gap) check-ins setting

# Analogy to Disaster Recovery Plan

## Company Disaster Recovery:

- Procedures
- Contacts / Call Trees
- Locations
- Responsibilities

## Family Continuity Platform:

- **Directory (Procedures, Contacts, Asset Locations, Responsibilities)**
- Readiness Score
- Missing Beneficiary Detection

## Future Solutions:

- Inheritance Gap Analysis
- Cross-Border Asset Checklist
- Executor Workflow
- Family Risk Assessment

# The Solutions: Chief of Staff for Your Family

## Family Readiness Score

Gap analysis, e.g.:

- No backup contact
- No instructions for overseas assets
- No beneficiary information for insurance
- Property ownership unclear

Recommended actions e.g.:

- Assign executor
- Update beneficiary
- Record lawyer details

## Knowledge Graph

The platform connects and understands:

- Family structure
- Beneficiaries
- Jurisdictions
- Assets
- Relationships
- Including updates

## Trigger events

Example: user inactive for 12 months.

System:

- Notifies trusted contact
- Begins verification process
- Releases instructions
- Activates executor workflow

# Key Questions

**1. If the data breach happens, then will my assets be revealed?**

No asset details can be viewed.

For example, instead of:

Bank Account

Account Number

Balance

Store:

Bank Relationship

Domestic Bank

Records located in Folder A

Beneficiary exists

Benchmark: Successful crypto inheritance products often focus on: Access procedures, Recovery instructions, Trusted contacts, rather than storing the actual assets.

**2. If this startup fails in 3 years, what happens to my family's information?**

Focus on portability features such as:

Data can be transferred out to integrated cloud (portability),  
Decentralized Data, User ownership, Export capability,  
Encryption, Minimal data collection

**3. Can the government access my information?  
Can the information be used against me later?**

Zero-knowledge (ZK) architecture as a selling point

Research 1Password and Proton.

Using ZK: "We cannot read your data even if we want to."

Positioning:

Your information is encrypted with keys only you control.  
We cannot view your asset details. We cannot provide  
information we cannot see.
